

turbulens toolkit architecture

Observer-facing layer (stable)

FITS I/O (astropy)
WCS / spectral-axis handling

Slicing, channel selection,
velocity-axis integration

Fourier processing
(classical estimator support)

Plotting / reporting

Inference layer (interchangeable back ends)

cnn
(trained ensemble)

fft-band
(synthetic band-edge detector)

fft-powerlaw
(real-data inertial-range fit)

Common .predict() interface
(mean, epistemic std / fit R^2)
